Long-term partnerships, not one-offs

3.5x Average ROAS
Ad spend that actually pays off

85% High-intent leads
Verified & conversion-ready

20+ Market Studies Conducted
Did the homework before every campaign

What I do.

I help businesses turn ad spend and content into actual pipeline not just traffic. My work spans strategy, paid media, SEO, content, and the tech behind all of it, because most marketing problems aren't creative problems, they're system problems.

Turn Ad Spend Into Revenue

Paid Advertising

Google Ads, Meta Ads, Snapchat & Tiktok Ads.

Meta Ad Campaign Management Studio-Republik & FitRepublik

Work Type
Permanent | Full Time

Time Period
3+ Years

Managed
Performance Marketing, CRO, SEO, UX Research Lead & Website management.

Overview

Managed full-funnel Meta advertising across FitRepublik and Studio Republik to drive adult memberships and academy enrollments

Due to company policy and an NDA, I'm not allowed to share actual Meta analytics data. In this case study, rather than going into depth on the exact campaign setup since every campaign is different I will share a balanced discussion of the methods that explain my best practices.

My Approach & Execution

It is a common mistake to understand that the higher the bid the better the result are, meta clearly state that "Highest bid alone will never guarantee feed placement: ads are ranked using a 'Total Value' score that combines your bid amount, estimated user action rates, and creative ad quality allowing highly engaging ads to consistently beat bigger budgets at a fraction of the cost."
Since business offer various activities, We utilized the "AI-powered Dynamic Creative Testing" with 4-in-1 asset variations, multiple creative visuals (Reformer Pilates, Functional Gym, Martial Arts) based on individual user behavior.

Key insight & Market Research

Market research is one of the key success of your PPC ads, In Dubai, there is a gym in almost every neighborhood within a 4km radius, Fitrepublik and Studio-republik are two different brands but offer's all-in-one sports for adult members and junior (term based programs), this it what it makes stand out compare to other competitor,

Pre-launch QA Process & Testing Framework

How much a single product cost? who can afford it, what is the most unique selling point...

The first three second video (thumb-stop rate), how much time user spend on landing page, tracked on-page behavior. Using GTM, we captured which specific sports programs users clicked via DataLayer and pushed those custom events into the Meta Pixel, allowing Meta's algorithm to optimize delivery and build tailored retargeting pools on Instagram.

Conducted rigorous testing before launch to verify that all GTM triggers, WhatsApp routing, ad copy descriptions, and 9:16 mobile creative assets met high visual standards with zero tracking errors.

Google Tag Manager | Conversion-Focused Landing Page | PractiCal

Overview

PractiCal's existing landing page was underperforming and leaking paid ad traffic. I conducted a comprehensive forensic audit of both their tracking infrastructure and landing page design, then redesigned the experience from the ground up to drive qualified customer acquisition.

The Core Problems

1. Blind Measurement & Baseline Tracking: GTM was configured to the bare minimum (basic pageviews only). It failed to track critical high-intent interactions such as which specific meal plans visitors browsed (Keto vs. High Protein), scroll depth, or direct WhatsApp taps.
2. High-Friction UX & Cluttered Layout: An unorganized visual structure forced users to swipe through awkward sliders just to see meal options, hiding key nutritional macros and causing high bounce rates.
3. Unqualified Lead Capture: The form was a generic 3-field box (Name, Email, Phone) that captured zero dietary preferences or fitness goals. The sales team received cold leads with no context, and the form lacked spam protection and privacy consent checkboxes.

My Approach & Execution

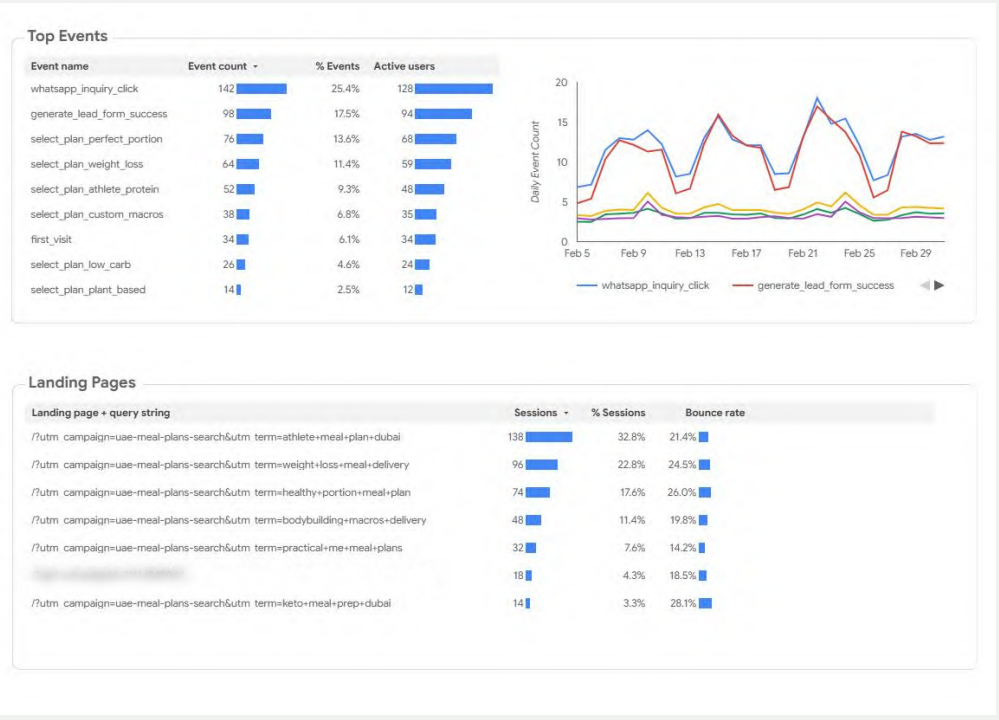

I redesigned the landing page layout and rebuilt their GTM architecture from scratch to capture and convert high-intent buyers:

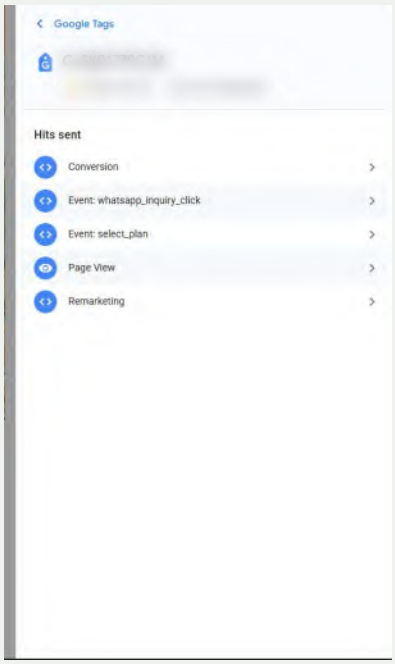

- **Plan-Specific Interaction Tracking:**
  Implemented custom event tracking on individual meal plan cards, giving marketing and culinary teams real-time data on which diets and protein targets drove the highest demand.
- **Enhanced Conversions on Lead Forms:**
  Configured Google Ads Enhanced Conversions to securely hash customer contact data upon submission, recovering lost conversions across mobile and desktop devices.

WhatsApp Lead Attribution:
Set up dedicated click triggers for all WhatsApp links so fast mobile inquiries were tracked as primary business conversions rather than lost traffic.

- **Segmented Remarketing Audiences:**
  Replaced generic retargeting ads with custom intent pools. Visitors who browsed the Athlete Protein plan were shown athlete-specific meal creatives, while users who already submitted a form were automatically excluded to prevent wasted ad spend.
- **Intent-Matched Personalization:**
  Engineered an adaptive landing page where the header, visuals, and key benefits dynamically tailored themselves to the visitor's specific search interest. For example, visitors searching for "Athlete Meals" immediately saw high-protein athlete menus, while those searching for "Fitness Meals" saw balanced lifestyle options—creating an instant 1-to-1 connection that maximized conversion rates.

Google Analytics | Onboarding UX & Self-Service Portal | FitRepublik

Overview

Designed and implemented a digital onboarding solution for junior assessments, replacing manual support calls with a dedicated parent portal. This eliminated program selection friction and empowered parents to self-register, schedule, and reschedule assessment sessions seamlessly.

Live Demonstration

https://member-portal-fitrepublik.azurewebsites.net/junior-membership/junior-assessment

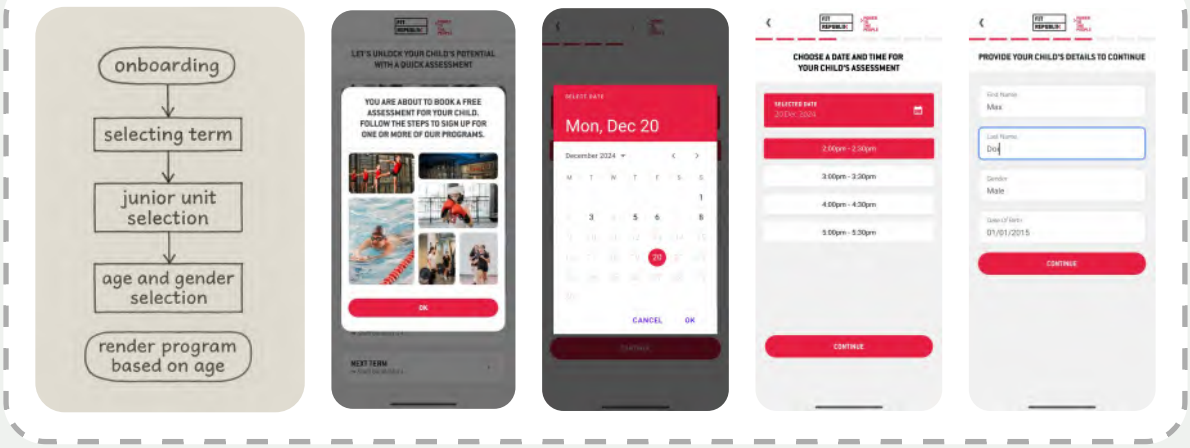

Approach (Strategy & UX Design)

I redesigned an overwhelming 15-field registration form into an interactive, multi-step stepper validated through wireframes. By letting parents customize their child's sports and coaches before asking for contact info, booking felt like an engaging quiz rather than paperwork, drastically reducing drop-offs.

Execution

I built this as a mobile web portal to eliminate the friction of app store downloads. Personalized links automatically recognize returning families and pre-fill their child's records, eliminating repetitive data entry. On submission, the system instantly delivers a digital assessment pass to the parent while updating the backend database and CRM in real time for the admissions team.

Creative

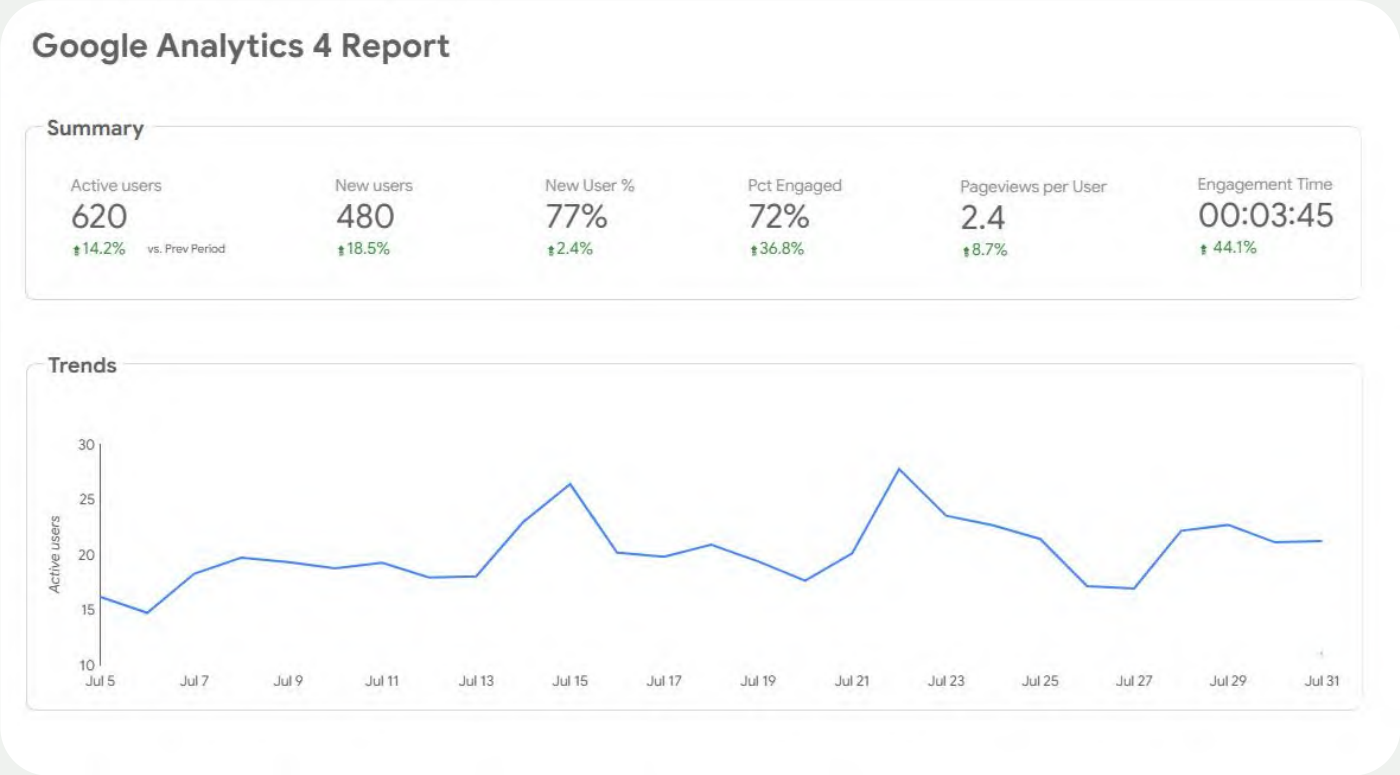

Results

Paired our onboarding portal with a high-intent Meta Ads campaign for our Junior Summer Camp. Once parents completed the initial ad form, they were redirected straight into this stepper flow to finalize their child's assessment booking.

Acquisition Source: Meta Ads (Instagram & Facebook) → Lead Form → Onboarding Portal

In-App Lead Gen Forms | Single Ad | Carousel Ads

Overview

Business setup in the UAE is one of the most competitive paid search categories in the region, Meta cannot reliably identify someone who is about to incorporate a company. LinkedIn can, because the intent signals sit in the profile: job title, company size, seniority, and industry.

My Approach & Execution

The UAE market for business setup, residency visas, and corporate PRO services is heavily saturated on Google Search cluttered with unqualified inquiries on Meta, My objective was to reach verified decision-makers such as corporate directors transitioning to entrepreneurship and foreign investors entering the UAE and turn them into qualified consultations.

Execution Strategy & LinkedIn Targeting

Stating the exact price upfront (AED 10,800) acts as an immediate qualification filter so users who lack the budget don't click, preserving valuable LinkedIn spend. Offering installment plans (Tabby/Tamara) on a high-ticket B2B service further reduced cash-flow hesitation.

Challenge & Mid-Campaign Optimization

Spend Protection excluded the (Audience Network & Expansion) to keep 100% of the budget focused on core decision-makers.

Set an Account Spending Limit to protect against accidental budget typos. Adjusted the ad scheduling (Dayparting) for sales alignment

Adding a "Custom Qualifying Question" & Updated the LinkedIn Lead Gen

Primary audience: corporate directors transitioning to entrepreneurship, plus UAE-based expats planning a company setup.

Google Ads | Azizi Developments

Work Type
Contract | Full time

Time Period
8 Month

Managed
Google Ads, & Performance Marketer

Overview & Objective

Azizi Developments is one of the leading private real estate developers in the UAE. Managed Google Ads campaigns focused on generating high-intent property enquiries for Azizi Developments and its residential projects across Dubai. The main focus was not simply increasing lead volume, but controlling search intent, wasted spend, lead quality and conversion performance. Capture high-net-worth international and local property investors, defend direct developer brand traffic from third-party broker bidding, and generate qualified sales consultations for off-plan launches.

Ads were distributed across relevant Google inventory based on campaign intent, including:

- **Google Search high-intent property searches**
- **YouTube awareness and remarketing**
- **Google Display Network targeted property audiences and remarketing**
- **Google Discover additional reach among relevant users**

Primary focus: Search for direct lead generation, with YouTube and Display supporting awareness and remarketing.

The Core Challenges

Hundreds of independent real estate brokers bid aggressively on keywords like "Azizi Riviera" and "Azizi Developments", stealing direct buyer traffic and inflating CPCs. Budget Bleed from Irrelevant Traffic: High search volume for non-buyer queries. High Industry CPCs: Generic terms like "buy apartment Dubai" cost AED 50–90+ per click.

The Google Ads Strategy

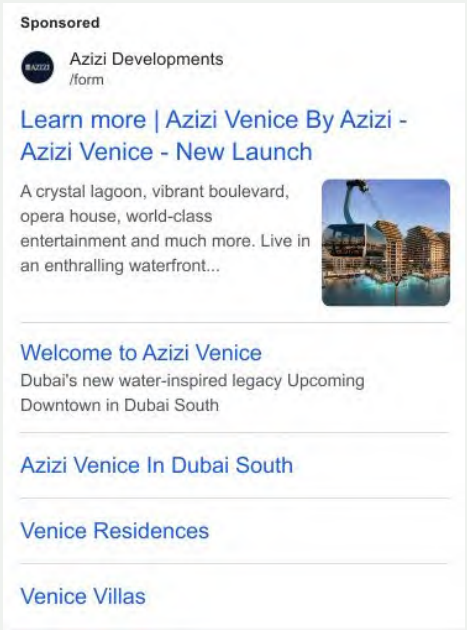

Implemented a structured Google Search framework combining a 3-Tier Campaign Architecture (Brand Defense, Project Intent, and GCC Investor Targeting), protected by an aggressive Negative Keyword Firewall, targeted specific high-intent project queries. Geo-targeted wealthy investor hubs (Saudi Arabia, UK, Germany, India). The Negative Keyword Firewall, Landing Page CRO & Lead Qualification, uses Dual Conversion Pathways & Price & Payment Plan Anchoring.
